

GOBIKA PONNUSAMY

Software Engineer I

Email: gobikaponnusamy2003@gmail.com | **Phone no:** +91 9025619499 | **Portfolio:** <https://gobikaponnusamy.github.io/>
Github: <https://github.com/gobikaponnusamy> | **LinkedIn:** <https://www.linkedin.com/in/gobika-ponnusamy/>

PROFESSIONAL SUMMARY

Software Engineer I with 2 years of experience building scalable backend systems, microservices, and full-stack applications using Java, Spring Boot, and React. Experienced in designing and implementing REST APIs, optimizing system performance, and improving reliability in production environments. Hands-on with AI-driven automation, building agents and agentic workflows for test generation and workflow automation. Strong focus on clean architecture, distributed systems, and secure, production-grade engineering.

SKILLS

Languages & Backend: Java, REST APIs, Microservices, Distributed Systems

Frameworks: Spring Boot, React.js, Node.js, GWT

Databases: PostgreSQL, Elasticsearch

Cloud & DevOps: Azure, Docker, Kubernetes, CI/CD

Tools & Platforms: Git, GitHub, Maven

AI & Automation: Multi-Agent Workflows, Amazon Bedrock, Claude, GitHub Copilot, Vector Embeddings

WORK EXPERIENCE

SOFTWARE ENGINEER I - ARIS (R&D)

May 2024 - Present

- Engineered core backend microservices and REST APIs for ARIS, a large-scale BPM enterprise platform serving global customers across multiple tenants, including User Management, Tenant Management, Document Storage, and Collaboration systems.
- Led migration from legacy SharePoint integration to Microsoft Graph API and Entra ID, modernizing backend services and improving reliability, scalability, and maintainability.
- Optimized large-scale document processing workflows handling millions of documents using caching and backend optimizations, reducing load time from 24s to <2s and move/delete operations from 34s to <3s.
- Improved production stability and resilience by debugging critical issues, performing root cause analysis, and resolving memory leaks and out-of-memory conditions in distributed systems.
- Developed AI-powered agents and agentic workflows, including a QA agent that automated migration from Selenium to Playwright and generated Playwright test scripts from natural language inputs, reducing manual test creation effort.
- Strengthened application security and system reliability by resolving vulnerabilities, upgrading dependencies, and implementing authentication integrations using OAuth, SAML, SCIM, and LDAP.
- Modernized the Documents module frontend by migrating from GWT to React, improving user experience, maintainability, and frontend scalability.

Award: Design Focus Award

API GATEWAY CLOUD INTERN - SOFTWARE AG (R&D)

September 2023 - May 2024

- Built and optimized CI/CD pipelines using Kubernetes-based runners, improving build and deployment efficiency.
- Developed a React-based dashboard for API ecosystem tools.
- Automated Developer Portal workflows, reducing manual effort and improving operational efficiency.

Award: Thank You Award

EDUCATION

2020-2024

B.E. Computer Science - Kongu Engineering College

CGPA: 9.16/10

PROJECTS

DriftGuard – Production Behavior Diff & Deploy Gate Platform

Link: <https://driftguard-2.onrender.com/>

- Engineered DriftGuard, a full-stack platform to detect API regressions by comparing production traffic with staging responses, reducing manual API validation effort by 85%+
- Designed scalable replay architecture with async traffic replay, deep JSON diffing, and WebSocket tracking, preventing 90%+ of critical contract-breaking issues from reaching production.
- Built deploy-gate mechanisms to block unsafe releases, with PII redaction and risk scoring for secure API validation.

Tech Stack: Java, Spring Boot, React, TypeScript, PostgreSQL, Redis, Docker
